                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   χχ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   XX OS XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid in treatment of leukaemias. AAU29510-ABU33304 represent the amino acid

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).

Recombinant expression of C. elegans fat-1 polynucleotide in a wide variety of host cells, including Arabidopsis thaliana and Saccharomyces cerevisiae, produces a polypeptide with omega-3 desaturase activity. A host cell transformed with C. elegans fat-1 polynucleotide is useful for desaturating an omega-6 fatty acid to an omega-3 fatty acid by growing the host cell under conditions under which the polypeptide is expressed. The fat-1 polypeptide is useful for producing lipids having a higher proportion of omega-3 fatty acid and the lipids are useful as food, oils, as nutritional supplements, and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    acyl desaturase fat-1 polypeptide. The polypeptide desaturates omega-6 fatty acid to a corresponding omega-3 fatty acid by catalysing the introduction of an omega-3 double bond into 18-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel host cell transformed with recombinant fat-1 polynucleotide encoding polypeptide which desaturates omega-6 fatty acid to corresponding omega-3 fatty acid, useful for producing lipids -
Caenorhabditis elegans fat-1 (omega-3 fatty acyl desaturase) protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is Caenorhabditis elegans FAT-1, an omega-3 fatty acyl desaturase protein. FAT-1 polypeptide is useful for producing lipids having a higher proportion of omega-3 fatty acid. Such lipids are useful as food oils nutritional supplements and as chemical feedstocks.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence represents a human secreted protein encoded by a nucleic CC acid of the invention. Secreted proteins and their related nucleic acids CC can be used in the diagnosis of or susceptibility to a pathological CC condition by determining the presence or absence of a mutation in a nucleic acid or the presence or amount of expression of a secreted CC protein. The sequences are used to prevent, treat or ameliorate a medical CC condition in e.g. humans, mice, rabbits, goats, horses, catts, dogs, CC chickens or sheep. The antibodies to the polypeptides can also be used in CC calleviating symptoms associated with disorders and in diagnostic communoassays e.g. radioimmunoassays or enzyme linkedCC immunoassays e.g. radioimmunoassays or enzyme linkedCC immunoassays e.g. radioimmunoassays or enzyme linkedCC immunoassays or creative disorders e.g. neophasms of the breast or CC arthitis, hyperproliferative disorders e.g. neophasms of the breast or CC iver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular CC disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders CC e.g. Alzheimer's disease, infections caused by bacteria, viruses and CC used to aid wound healing and epithelial cell proliferation, to help or transplantation to regenerate tiscuse in chemetaris and as a food
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds t (I). A composition comprising (I) or a nucleic acid encoding (I), may used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treatted may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromotography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                              Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment of the second of the manufacture of medicaments for

        AAU03601-AAU03722 represent Group B Streptococcus (Streptococcus agalactiae) amino acid sequences of the invention. S. agalactiae is an encapsulated bacterium which is a major pathogen of humans causing sepsis and meningitis in neonates as well as adults. The S. agalactiae antigenic polypeptides are used to vaccinate against Group B Streptococcus infections, particularly to prevent infection in new born children
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB577737-ABB72072).
                                                                                                                                               New polypeptides derived from Streptococcus agalactiae are useful to provide detection of, and vaccination against, Group B Streptococcus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful in the preparation of a medicament for the treatment or prophylaxis of Group B Streptococcus infection. The invention does not have the disadvantages of varied response rate associated with prior art capsid polysaccharide vaccination against Group B Streptococcus.
                                                                                                                                                                                                                                                                                                                                                                19-SEP-1991.

ITS LARGE N-TERMINAL CYTOPLASMIC REGION HAS TH BINDING SITE IN THE N-TERMINUS AND MODULATORY SITES IN THE PORTION IMMEDIATELY UPSTREAM OF THE CHANNEL REGION. PTM: PHOSPHORYLATED ON TYROSINE RESIDUES (BY SIMILARITY). MISCELLANBOUS: CALCIUM APPEARS TO INHHIT LIGAND BINDING RECEPTOR, MOST PROBABLY BY INTERACTING WITH A DISTINCT CALCIUM-BINDING PROTEIN WHICH THEN INHIBITS THE RECEPTOR. SIMILARITY: BELONGS TO THE INSP3 RECEPTOR FAMILY.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
